Advanced Skin Care Procedures

By Dr. Lance Setterfield

Q: I've heard about a new facial treatment on Extra TV that Hollywood is raving about. Can you tell me about it and why is it so fabulous?

A: Yes, it's called the DF Facial. This is one of the most effective treatments in the world today for enhancing the penetration of high doses of vitamins into the skin. It can reduce pore size, even skin tone, tighten, lift and brighten your skin, while providing an overall healthier appearance. "Fibroblasts", (cells that play the biggest role in keeping skin young), require Vitamins A and C to make collagen and elastin. Modern skin care is not just about the right ingredients, but about delivering those ingredients to the depth of the fibroblasts, where they do the most good. Only the DF Facial penetrates to these levels.

Q: What makes this facial treatment better than others?

A: This treatment uses the Ionzyme® DF machine which applies sound waves and electrical fields to make your skin more permeable, thus increasing the absorption of natural essential vitamins and antioxidants necessary for treating various skin problems. This treatment is one of the best choices for improving sun damage, wrinkles, brown spots, acne and rosacea. The DF machine is designed to stimulate maximum thickening of the skin to allow intense absorption of vitamins. It better controls pigment production, restores normal skin blood flow, and properly oxygenates your skin. The DF Machine is possibly the most advanced penetrant-enhancing machine available today.

Q: There are so many choices out there, choosing a facial seems more complicated now, any guidance for those of us that are confused?

A: This is more than a beauty facial. If you are looking for a results-driven facial and strive to achieve healthy skin, this treatment is for you. You might find it helpful to know this is an excellent treatment if you are considering cosmetic surgery or if you have had surgery and are now wishing to maintain those results.
